

RESIN FICKERT

Description

"Techno resin bond" fickert dedicated to multi-head automatic polishing lines that normally follow metal diamond fickert. Technology that optimizes the transition between the metallic fickert and the first positions of the resinoid abrasives. Excellent stock removal rate combined with high durability performance. Very good preparation of the slab surface for the subsequent polishing phases. Dedicated to the processing of quartz agglomerate slabs.

Typology

Calippo format and squared format. Versions RM, RM1, RM2, RM40, RM40-S

Sizes available

Calippo format with length 150 mm and 170 mm.

Squared format with length 130 mm and 150 mm

Grits available

From grit #80 to grit #200

RESIN ABRASIVES

Description

"Soft resin bond" abrasives dedicated to multi-head automatic polishing lines and single-head bridge polishing machines for polishing agglomerate quartz. Resin abrasives with high cutting ability, powerful polishing effect, high gloss level. Sequences depend on the material, the machine type, the number of available heads and the customer requirements regarding the surface finish. The continuous rim geometry and suitable bonds guarantee a perfect surface finish.

Typology

Calippo format and squared format with double chamfer. Versions HG, HF, H, HD, M, GF, CB

Sizes available

Calippo format with length 170 mm.

Squared format with double chamfer with length 140 mm

Grits available

From grit #100 to super shining grit #5000
