ACID-BASED CLEANER FOR PORCELAIN STONEWARE SURFACES

- Acid descaler formulated for the removal of organic and inorganic dirt, as well as polymer-modified grouts.
- Non-foaming.
- Suitable for both mechanical and manual use.

GRES CLEAR

Acid-based cleaner designed to restore porcelain stoneware floors that have been installed for some time and are affected by dark residue or heavy contamination. Also ideal for the first cleaning after installation, it effectively removes residues of standard cement-based grout. It restores the original color of joints that appear discolored due to carbonation or organic dirt.

Effectively eliminates limescale deposits from floors and walls frequently exposed to water rich in impurities.

How to use

- For tough dirt, increase the concentration up to using the product undiluted.
- Always test on an uninstalled tile or in a hidden area before cleaning the entire surface.
- Pour the product into a bucket for manual use, or into a floor scrubber or single-disc machine.
- Let the solution sit for 10–20 minutes, keeping the surface wet.
- Scrub the surface with a mop, abrasive pad or melamine pad, or with an abrasive/melamine disc using plenty of water.
- Remove dirty water and rinse thoroughly. Repeat if necessary.
- Do not use on marble or acid-sensitive stones.

Dilution

For deep cleaning, dilute in water at a concentration of 10% to 30%.

Technical data

- Appearance: Liquid.
- Contains: Nitric acid.
